

Regulatory inspections become the driving force behind your compliance.

Cloud VGP is a next-generation platform combining CMMS and regulatory intelligence. It connects companies and inspection bodies to improve field efficiency, support confident decision-making and turn every inspection into concrete, lasting action.

Choose the inspection partner who follows through on every inspection.

The professional presenting this Book offers far more than a one-off inspection. With Cloud VGP, they connect their field expertise to your maintenance and QHSE/HSEQ teams, supporting you through corrective-action closure and future deadlines.

01 FIELD EXPERTISE

They understand your equipment, your constraints and the reality of your risks.

02 A MISSION THAT GOES FURTHER

Their involvement continues beyond the report through a tangible, lasting service.

03 FROM FINDING TO ACTION

Every finding can become a tracked, documented action through to closure.

04 CONNECTED TO YOUR TEAMS

Maintenance, QHSE/HSEQ and management work from the same reliable data.

05 INFORMATION ALWAYS AVAILABLE

Reports, evidence, histories and deadlines remain accessible and organised.

06 A LONG-TERM PARTNER

They remain your trusted partner for maintaining compliance over time.

Regulatory intelligence should never end with the report.

A report captures the situation at a given moment. Its full value begins when the inspector interprets it, shares it with your teams and turns every result into a clear, traceable and lasting decision in Cloud VGP.

SHARED EXPERTISE

With Cloud VGP, the inspector and the client come together around reliable, real-time data.

- The inspector observes, verifies and assesses the risk. Their field experience gives meaning to every piece of data collected.
- With Cloud VGP, findings, evidence and corrective actions immediately become organised, assigned and tracked tasks.
- Maintenance, QHSE/HSEQ and management share the same information to prioritise, act and demonstrate compliance.

**An inspection is an event.
Compliance is a continuous process.**

Every inspection strengthens tomorrow's compliance.

Regulatory intelligence is not simply about receiving new legislation. It means understanding its impact, identifying the assets concerned and turning obligations into concrete action.

- Regulatory sources linked to equipment families.
- Impact analysis by site, activity and risk level.
- Inspection templates and deadlines kept up to date.
- Complete traceability for audits and QHSE committees.

Vigilance that inspires confidence

Firm and attentive, Cloud VGP partner inspectors embody trust and safety.

They observe, anticipate and turn regulatory intelligence into clear, useful decisions.

Different fields of expertise. One shared promise of trust.

Nuclear, lifting, fire safety, electrical and industrial equipment: every assignment calls for a specialist. Cloud VGP brings their expertise together around one method and one continuous service.

A family of experts, one shared level of commitment

Every partner inspector remains the face of the client relationship. Cloud VGP strengthens their professional expertise: assignment preparation, structured data collection, clear reporting, corrective-action tracking and handover to maintenance or QHSE/HSEQ.

For the company, this community offers a simple assurance: whatever the specialist discipline, findings remain clear, traceable and immediately actionable. The inspection no longer ends when the report is delivered; it becomes the starting point for sustained compliance over time.

From the report to continuous compliance

The inspection no longer ends when the report is delivered. With the inspector as a trusted point of contact, every conclusion is structured, explained and shared with the teams responsible for action. Findings become an action plan tracked over time.

01

Build knowledge

Every result is retained in a clear, contextualised and actionable equipment record. The company can retrieve its history, evidence and key decisions whenever they are needed.

02

Take control

Findings no longer remain buried in a forgotten report. They are prioritised, assigned and turned into maintenance actions that managers can track through to resolution.

03

Build loyalty

The inspector remains involved beyond the visit. They help teams interpret the results, prepare future deadlines and build a lasting relationship around continuous compliance.

FROM FINDING TO ACTION. FROM REPORT TO CONTINUITY.

A value-added product in the inspector's offering

The inspector becomes the trusted link between the company, its regulatory data and the Cloud VGP CMMS. They naturally extend their mission without compromising their independence or changing their profession.

01

Differentiation

A client experience that reports alone cannot provide.

02

Business value

Software value that complements the field service.

03

A stronger brand

A more modern, visible and continuous relationship.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Why companies embrace it immediately

Because the recommendation comes from the person who truly understands the equipment and the risks. The inspector seamlessly connects the field with maintenance, QHSE/HSEQ teams and management.

01

No duplicate entry

Equipment, inspections, findings and documents are already connected.

02

A shared view

Every team accesses the information relevant to its role.

03

Rapid implementation

Continuity begins as soon as the inspection is delivered.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

The instinct that protects compliance.

Cloud VGP does more than record what has happened. The platform draws attention to anything that could be overlooked, delayed or underestimated.

Some anomalies are visible.
Others only emerge later.

A missed deadline. An unresolved finding. A missing document. A delayed intervention. Cloud VGP organises weak signals before they become operational risks.

One experience, two perfectly aligned sides

One chain of trust: the inspector assesses and documents; the company acts; Cloud VGP preserves the context, evidence and history needed for every decision.

01

For field teams

Mobility, templates, photos, signatures and report generation.

02

For the client

Action plans, deadlines, documents and dashboards.

03

For management

Consolidated indicators, risks and prioritisation.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Compliance becomes visible and manageable

A valuable inspection produces more than a report: it gives the company a clear view of its equipment, deadlines and priorities. With the inspector as a trusted third party, the results are immediately understandable to maintenance, QHSE/HSEQ and management.

01

See

Every item of equipment is placed in context: site, risk family, status, history and next deadline. Compliance is no longer isolated information; it becomes a clear, readable situation.

02

Decide

Priorities reflect severity, delay, asset use and intervention capacity. The inspector helps the company distinguish genuine urgency from the simple volume of tasks.

03

Demonstrate

History, evidence, findings and decisions remain accessible. During an audit, QHSE committee or budget review, the company has a reliable, documented account.

CLEAR DATA. FASTER DECISIONS. LASTING COMPLIANCE.

The inspection becomes a valuable record

Every report, finding and piece of evidence remains linked to the equipment concerned — long after the PDF is sent.

01

Centralise

Reports, photos, technical documents and history come together around each item of equipment.

02

Retrieve

A quick search returns the right information without trawling shared folders or email inboxes.

03

Act

Findings, reminders, repairs and closures remain linked to the original observation.

STRUCTURED DATA. A PRESERVED HISTORY. ACTION MADE POSSIBLE.

A man wearing a white hard hat, safety glasses, and a dark blue jacket with a 'Cloud VGP' logo is holding a tablet. He is looking up at a drone flying in the sky. In the background, a large wind turbine is visible against a cloudy sky.

Fieldwork, without compromise.

Inspecting a wind turbine means looking far beyond ground level. The Cloud VGP inspector combines professional expertise, drone technology and immediate traceability to observe, document and report every finding with precision — backed by the badge identifying a partner equipped to act.

The enhanced inspector, never replaced

Cloud VGP extends the reach of expertise without ever making it impersonal. The inspector retains professional judgement, guidance and trust; the platform provides memory, method and continuous service.

01

Prepare

The assignment, equipment fleet, history and relevant documents are available before the visit. The inspector prepares with the right context.

02

Inspect

Guided entry, visual evidence and mobile operation secure every step while preserving the inspector's freedom to apply field judgement.

03

Report

A consistent report is produced and shared quickly. Findings then remain available for maintenance, QHSE and future deadlines.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Designed for the real pace of field work

A clear, fast interface designed around field constraints: every action counts and every piece of evidence remains usable.

01

Less friction

Streamlined screens reduce handling and present essential information at the point of decision.

02

Stronger evidence

Photos, observations, signatures, timestamps and location data strengthen the quality of field evidence.

03

Greater confidence

Data is secure, synchronised and immediately actionable by both the inspection body and the client.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

The inspection body's expertise becomes a standard

Templates, checkpoints and business rules ensure consistent quality.

The inspection body's methods become a structured knowledge asset.

Templates, standards, severity levels and reporting rules are shared across the team while preserving the inspector's professional judgement.

01

Library

Templates organised by equipment family speed up preparation and ensure comprehensive inspection coverage.

02

Consistency

Every inspector applies the same level of rigour, with consistent wording and criteria.

03

Continuous improvement

Regulatory changes and field feedback are rapidly incorporated into the whole team's practices.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

A report that gives clients a reason to choose you.

With Cloud VGP, you deliver a clear, detailed and actionable report: findings, photos, corrective actions, severity and next steps. The client immediately understands the situation and knows what to do. Your expertise extends beyond the visit and becomes tangible value that sets you apart.

01

A recognised signature

The report carries your inspection body's name, contact details and signature. The client recognises your expertise and knows who to trust with the next steps.

02

Understand to decide

Findings, photos, corrective actions, severity and recommendations are explained and prioritised. Maintenance, QHSE and management immediately know what to address.

03

A visible difference

Where a standard report can be difficult to use, you deliver a complete, clear document linked to the equipment. Your value remains visible after the visit.

A CLEARER REPORT. A MORE DISTINCTIVE INSPECTOR. A BETTER-SERVED CLIENT.

The inspector already preparing what comes next

With Cloud VGP, every inspection opens the next step: the deadline is identified, the client informed and the intervention prepared. The inspector remains present after the visit and becomes the partner helping the company keep its obligations under control.

01

Schedule

Assignments, inspectors, sites and time slots are organised in one clear shared schedule.

02

Frequency

Future deadlines are recalculated from the completed inspection and the applicable frequency.

03

Reminder

Structured reminders reduce omissions and turn compliance into an ongoing relationship.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

One team, one consistent voice

For the client, every intervention meets the same standard: the same method, information and rigour, whoever conducts the inspection.

A high-performing organisation makes the right information available to the right person. Cloud VGP considers authorisations, client scopes, skills and responsibilities to coordinate the team without compromising confidentiality.

01

Roles

Access rights adapt to each employee's role, entity and assigned portfolio.

02

Territories

Authorisations and skills make it easier to assign the right inspector to every mission.

03

Continuity

The inspection body shares one method and history, even when teams work across multiple sites.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Less administration. More value for the client.

Cloud VGP reduces duplicate entry and repetitive tasks, giving inspectors more time to analyse, explain and support every client.

01

Automate

Preparation, template duplication and retrieval of existing information reduce duplicate entry.

02

Reuse

Reports, distribution and archiving follow one consistent process that limits manual operations.

03

Accelerate

Structured field data prevents late corrections and shortens delivery time.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

From finding to action.

Every finding can become a tracked, evidenced and closed intervention.

In Cloud VGP, the inspector creates and documents the finding, then initiates the required actions with the relevant teams.

FINDING • ASSIGNMENT • TRACKING • REPAIR • EVIDENCE • CLOSURE

After the repair, those involved record the outcome and add photos, comments and supporting documents. The information flows back to both the inspector and the client.

Every anomaly becomes a tracked action. Every action leaves evidence.

Findings become managed interventions

A finding identified by the inspector becomes a contextualised, tracked and evidenced maintenance action. The Cloud VGP CMMS starts directly from reliable field data.

01

Assess

Severity, owner, deadline and estimated cost.

02

Intervene

A work order linked to the original finding.

03

Close

Repair evidence and formal closure of the finding.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

A CMMS born from regulatory inspections

No duplicate entry and no loss of context: the anomaly, equipment, photo, report and severity level immediately feed the maintenance workflow.

01

Complete context

Equipment, report, photo and observation brought together.

02

Tracked action

Status, deadline, assignee and comments.

03

Reliable history

Every step remains linked to the asset.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Helping the client act at the right time

The inspector does more than report deviations: they prioritise them so every finding becomes a clear action.

01

Severity

Severity levels immediately distinguish critical situations from corrections that can be scheduled.

02

Deadline

Managers assign an action, deadline and owner without losing the context of the original finding.

03

Accountability

Summary views reveal delays, recurring issues and the areas where effort should be focused.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

With your inspector, every asset retains its history

The Cloud VGP CMMS turns every inspection into lasting oversight: the company retrieves its history, anticipates action and gains better control of its asset base.

01

A reliable view

Identification, inspections, documents and findings are brought together in one place for reliable, immediately accessible information.

02

Prepared decisions

The history of anomalies, repairs and deadlines helps teams prioritise action before a risk becomes critical.

03

Continuous oversight

Inspection data feeds maintenance and QHSE: fewer omissions, less searching and better control of the asset base.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

A CMMS that genuinely simplifies everyday work

With Cloud VGP, the client finds equipment, deadlines and actions in one place. Compliance finally becomes clear and action can begin immediately.

01

See everything

History, documents, inspections and findings are brought together in one place, without searches or scattered files.

02

Act faster

Anomalies and deadlines become clear, prioritised actions tracked through to resolution.

03

Stay confident

Maintenance, QHSE and management share the same information and retain control of the asset base.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

From identified risk to action.

The QHSE manager knows what to address, who to involve and why. The employee intervenes with clear instructions, and every action remains linked to the equipment.

01

Decision

The QHSE manager knows which anomaly to address and why it matters.

02

Intervention

The employee acts with clear instructions, in the right place and at the right time.

03

Traceability

The repair remains linked to the equipment, inspection and its history.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Multiple contributors. One traceable record.

Several teams intervene; QHSE retains one unified view.

Every action, owner and piece of evidence remains linked to the equipment.

01

A clear assignment

Every external assignment includes the essential information needed to understand and price the intervention.

02

Controlled access

Targeted access protects other data while making collaboration with the partner easier.

03

Traceable feedback

The report, evidence and resolution status return to the equipment lifecycle record.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Compliance becomes a shared language.

Maintenance, QHSE/HSEQ, operations and management finally work from the same reality.

Shared data for effective risk control

QHSE/HSEQ relies on data qualified by the inspector to map risks, manage action plans and demonstrate control of compliance.

01

Map

Risks and deviations by site and activity.

02

Demonstrate

Audit-ready traceability.

03

Improve

Action plans and indicators over time.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

From field data to decision

Clear indicators for operational managers and executive leadership.

The dashboard does not replace analysis; it makes it faster and more reliable.

Inspection and maintenance data is summarised for each role, from site manager to executive leadership.

**01**

Compliance

Simple indicators show deadlines, compliance, open findings and progress on actions.

02

Actions

Filters by site, asset base, category or period reveal the trends behind the totals.

03

Deadlines

Decisions are based on traceable data and can be monitored over time.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

An audit should never begin with a hunt for documents.

With an inspector equipped with Cloud VGP, your company quickly retrieves the history, evidence and decisions linked to every asset. The file is structured before the audit, so your teams respond with facts rather than searches.

01

History

Evidence remains linked to the equipment, inspection and corresponding action.

02

Documents

Statuses and histories show who did what, when and on what basis.

03

Traceability

Teams enter the audit with a coherent, clear and immediately verifiable file.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Connect regulations to the equipment concerned

Regulatory intelligence becomes actionable when its impact reaches the real asset base. Regulatory intelligence becomes valuable when it meets the reality of the asset base. Cloud VGP helps connect a regulatory change to the relevant equipment families, sites and inspections, turning information into an action plan.

01

Understanding

Legislation and requirements are classified by domain, scope and effective date.

02

Targeting

Potential impact is matched against the equipment and practices actually present in the company.

03

Application

Managers identify the adaptations, inspections or documents to schedule and track their progress.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

AI to assist, summarise and alert

AI summarises, connects and alerts; the inspector remains the professional authority. Cloud VGP strengthens analysis without automating judgement or diluting responsibility.

01

Summary

Rapid review of reports and histories.

02

Detection

Weak signals, inconsistencies and delays.

03

Action support

Contextualised, verifiable suggestions.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

The right document, for the right asset, at the right time

Technical documentation remains linked to its operational context.

Technical documentation gains value when it remains available in context: manuals, certificates, reports, drawings, photographs or repair evidence. Every user retrieves the right version directly from the relevant asset.

**01**

Classification

Documents are classified by equipment, type, date and visibility level.

02

Availability

Field teams access useful information without navigating a complex document hierarchy.

03

Validity

Versions and evidence are retained to explain a decision or prepare an intervention.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Clear responsibilities

The platform clarifies roles across inspection, maintenance, QHSE and management. Compliance involves several professions, but everyone must know where their responsibility begins and ends. Cloud VGP clarifies roles, access scopes and approvals without creating a parallel organisation.

01

Owner

The inspector assesses the finding while retaining full professional independence.

02

Action lead

Maintenance teams and service providers manage actions with clear deadlines, evidence and statuses.

03

Oversight

QHSE and management set priorities, monitor deviations and validate overall control.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Trust as infrastructure.

A professional platform must be as credible in its security as it is in its capabilities.

An architecture designed to last

Trust built in the field continues through a secure, available and traceable architecture designed to protect sensitive regulatory and operational data.

01

Protection

Access rights, encryption and logging.

02

Resilience

Backups and service continuity.

03

Support

Phased deployment and support.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

Get started without an endless project

Cloud VGP adapts to your maturity level and chosen scope.

Deployment begins with the real need: one inspection body, one client, one asset base or one priority process. The platform becomes operational quickly, then expands at the organisation's pace without imposing a disproportionate IT project.

01

Define

Essential data and inspection templates enable a controlled initial scope.

02

Import

Implementation support adapts rights, templates and workflows to the inspection body's proven methods.

03

Adopt

New sites, users and functions are activated progressively without rebuilding what already exists.

ONE PLATFORM. ONE DATASET. ONE CONTINUOUS SERVICE.

One continuous thread of trust, from inspection to action

Your inspector remains your trusted point of contact. Cloud VGP connects their findings to your equipment, teams and required actions. Everyone shares the same information to decide, act and protect safety over the long term.

01

The qualified finding

The inspector identifies deviations, explains priorities and provides an independent view of equipment safety.

02

Controlled action

Your teams know what to correct, on which equipment and in what order, with clearly identified responsibilities.

03

The continuous link

Cloud VGP connects the finding, equipment, action and evidence so nothing is lost between inspection and making the asset safe.

SHARED INFORMATION. CLEAR RESPONSIBILITIES. CONTINUOUS TRUST.

Compliance managed across every critical environment.

Industry, energy, construction, transport, defence, logistics and the public sector: Cloud VGP supports organisations with widely differing asset bases, professions and levels of requirement.

INDUSTRY

Saint-Gobain • Schneider Electric
• Air Liquide

ENERGY

EDF • Engie • Enedis •
TotalEnergies

CONSTRUCTION

VINCI • Bouygues • Eiffage •
Colas

TRANSPORT

SNCF • RATP • Air France •

AEROSPACE

Airbus • Safran • Dassault
Aviation • Thales

PUBLIC SECTOR

Local authorities • Networks •
Multi-site organisations

One shared platform. Deployment tailored to every organisation.

When field data transforms industrial performance.

Two organisations, two contexts, one shared requirement: make compliance visible, actionable and sustainable.

The inspection body remains the trusted partner bringing this continuity to its clients.

SAINT-GOBAIN / POP3P

National multi-site asset base: inspections managed and orchestrated internally.

KLEBER MOREAU / VINCI

Critical equipment: availability and compliance maintained.

Saint-Gobain / POP3P: bringing inspections in-house for better control.

POP3P managed thousands of assets across several hundred branches. The challenge: regain control of schedules, costs and inspection data.

-60 %

regulatory inspection budget

x3

productivity of internal teams

100 %

of branches on one platform

THE CLOUD VGP RESPONSE

Centralised equipment and deadlines, automated route planning, actionable inspection data and a Private SaaS edition tailored to POP3P's needs.

"We cut our budget by two-thirds while becoming more productive."

Kleber Moreau / VINCI: zero tolerance for critical equipment.

For this VINCI Group subsidiary, every unplanned outage directly affects production. Compliance must therefore be visible in real time and immediately demonstrable.

-60 %

equipment downtime

100 %

of the fleet continuously
compliant

0

audit failures

THE CLOUD VGP RESPONSE

Centralised dashboard, rapid internal inspections, evidence accessible by QR Code and preventive maintenance driven by field data.

“Every day counts: our fleet and equipment remain operational and compliant.”

Follow through on every inspection.

A full-page photograph of a factory setting. In the foreground, a black French Bulldog sits on the left, looking up towards the right. Two men stand in the center-right; the man on the left wears a dark blue work jacket and holds a tablet displaying charts and graphs, while the man on the right, in a dark suit, looks on. In the background, a worker in a white hard hat and dark uniform is working on a large industrial machine. The scene is dimly lit with industrial lights.

Turn every assignment into a lasting relationship, every finding into action and every piece of data into trust.
